

PHP/MySQL development

a Twitter-like application

Maxime Martineau

Polytech Tours Département Informatique

December 13, 2016

Outline

The project

PHP

PHP and MySQL

Twitter application

- ▶ Users : can post, follow a user, ...
- ▶ Post : message from a user
- ▶ Notification system
- ▶ Hashtag : to mark a given topic (ex: #DevelopersBeLike)

Frame

- ▶ 6 practical works (12h)
- ▶ Work in pairs
- ▶ Code to give back at the end (the database schema + the model/ files)

Project structure

`http://github.com/prafiny/db-project`

The screenshot shows the GitHub repository page for `prafiny/db-project`. At the top, there's a navigation bar with links for 'This repository', 'Search', 'Pull requests', 'Issues', and 'Gist'. Below this, the repository name 'prafiny / db-project' is displayed, along with statistics: 1 Unwatch, 0 Stars, and 0 Forks. A secondary navigation bar includes links for 'Code', 'Issues 0', 'Pull requests 0', 'Projects 0', 'Wiki', 'Pulse', 'Graphs', and 'Settings'. A message states 'No description or website provided. — Edit'. Below this, a summary bar shows '57 commits', '1 branch', '0 releases', and '1 contributor'. The main section features a 'Branch: master' dropdown, a 'New pull request' button, and buttons for 'Create new file', 'Upload files', 'Find file', and 'Clone or download'. A table lists recent commits by Maxime Martineau, including files like `config`, `controller`, `instructions`, `lib`, `model`, `tests`, `view`, `www`, `.gitignore`, and `README.md`, along with their commit messages and timestamps.

File	Commit Message	Time Ago
<code>config</code>	db, autoload and conf + fixes	a day ago
<code>controller</code>	unfollow and follow	16 hours ago
<code>instructions</code>	instructions 1 + gitignore	14 hours ago
<code>lib</code>	fixes	21 hours ago
<code>model</code>	test and model fixes	16 hours ago
<code>tests</code>	test and model fixes	16 hours ago
<code>view</code>	unfollow and follow	16 hours ago
<code>www</code>	unfollow and follow	16 hours ago
<code>.gitignore</code>	instructions 1 + gitignore	14 hours ago
<code>README.md</code>	Update readme	15 hours ago

Code

`http://github.com/prafiny/db-project`

- Instructions (in the folder `instructions/`)
 - Read `0setup.pdf` for environment installation
 - Read `1user.pdf` for first work
- Models to be completed (files in `model/`)

PHP : Data

► Declare a variable

```
$a = 23; // $a is an int  
$b = 2.3; // $b is a float  
$c = true; // $c is a boolean  
$d = array("a", 1, "b"); // $d is an array
```

PHP: Data

► Deal with arrays

```
$a = array("a", "b", 1);  
echo $a[0]; // prints "a"  
$a[0] = "A";  
echo $a[0]; // ?  
$a[] = 2; // $a == ?
```

► Associative arrays

```
$fruit = array("name" => "orange", "color" => "orange");  
echo $fruit["name"]; // ?  
echo $fruit["color"]; // ?  
$fruit["color"] = "black";
```

PHP : Data

- ▶ Create and use a stdClass object

```
$fruit = (object) array("name" => "orange", "color" =>
    "orange");
echo $fruit->name; // ?
echo $fruit->color; // ?
```

PHP : Controls

► If stanzas

```
if($a == 1) {  
    echo "yoohoo :D";  
}  
else {  
    echo "oh :(";  
}
```

PHP : Controls

► While loops

```
$i = 0;
while($i <= 10) {
    echo $i;
    $i++;
}
```

► For loops

```
for($i = 0; $i <= 10; $i++) {
    echo $i;
}
```

► Foreach loops

```
$arr = array(0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10);
foreach($arr as $i) {
    echo $i;
}
```

PHP : Functions

- ▶ Create a function

```
function inverse($nb) {  
    return 1/$nb;  
}
```

- ▶ Use a function

```
echo inverse(3); // ?
```

PHP : Error handling with exceptions

► Throw an exception

```
function inverse($nb) {  
    if($nb == 0) { throw new Exception('Division by  
        zero.');
```

 return 1/\$nb;
}
echo inverse(0);
echo "I can has display ?"; // ?

PHP : Error handling with exceptions

► Throw an exception

```
function inverse($nb) {  
    if($nb == 0) { throw new Exception('Division by  
        zero.');
```

```
    return 1/$nb;  
}  
echo inverse(0);  
echo "I can has display ?"; // ?
```

► Catch an exception

```
try {  
    echo inverse(0);  
}  
catch(Exception $e) {  
    echo $e->getMessage();  
}  
echo "I can has display ?"; // ?
```

PHP and MySQL : PDO

PHP Data Object

► Connection

```
$db = new PDO('mysql:host=SERVER_ADDR;dbname=DB_DBNAME',  
             DB_USER, DB_PASS);
```

► Queries

```
$sql = 'SELECT name, color, calories FROM fruit ORDER BY  
       name';  
foreach ($db->query($sql) as $row) {  
    print $row['name'] . "\t";  
    print $row['color'] . "\t";  
    print $row['calories'] . "\n";  
}
```

PHP and MySQL : PDO

PHP Data Object

► Prepare query (with variables)

```
$sql = 'SELECT name, colour, calories FROM fruit WHERE  
        calories < :calories AND colour = :colour';  
$sth = $dbh->prepare($sql);  
$sth->execute(array(':calories' => 150, ':colour' =>  
        'red'));
```

PHP and MySQL : PDO

PHP Data Object

► Prepare query (with variables)

```
$sql = 'SELECT name, colour, calories FROM fruit WHERE
        calories < :calories AND colour = :colour';
$sth = $dbh->prepare($sql);
$sth->execute(array(':calories' => 150, ':colour' =>
        'red'));
```

► Error handling (with Exceptions)

```
try {
    $sql = 'SELECT name, color, calories FROM fruit ORDER
            BY name';
    foreach ($dbh->query($sql) as $row)
        { do stuff; }
} catch (\PDOException $e) { print $e->getMessage(); }
```
